

INFINIDENT

SOLUTIONS

Lab Model Q/FA

High-grade working models with
removable tooth stumps

Lab Model Q / FA

Order Number 001-7727EN

INDICATIONS

As the basis for crown and bridge frameworks in the anterior and posterior regions for up to 16 units.

BENEFITS

- + Sturdier than plaster models
- + Stump shape does not change even if the restoration is inserted and removed many times
- + Individually removable, prepared stumps*

REFERENCES

With Lab Model Q / FA physical working models made of acrylate resin can be produced based on digital impression data (as an STL file from your model builder software).

Here you have the choice between a quadrant model (Q) or a full arch model (FA) with up to 16 teeth per jaw.

The stumps are segmented below the preparation margin from the model and can be pushed out of the model base.

Both models consist of the upper and lower jaw.

Note: A terminal occlusion holder is not included.

* Please note the applicable design specifications.
